Giving Shape to Ideas

Automate Your Document Workflow with Dispatcher Phoenix Foundations.

foundation

 **Dispatcher**
Phoenix Foundations

Automate. Automate your document workflow with Dispatcher Phoenix Foundations. Increase productivity, reduce costs, and optimize your business processes with Dispatcher Phoenix Foundations, a customizable application that automates and streamlines image processing, printing, and routing. Using Dispatcher Phoenix Foundations' Workflow Builder, you can create workflows quickly and easily to handle all of your document processing needs. Automate repetitive tasks, send documents to key recipients via fax or email, clean up scanned images, browse your PC folder structure at the MFP panel for file distribution, add watermarks and annotations to image files and PDFs – all with the touch of a button. With Dispatcher Phoenix Foundations' automated advanced document processing, your business will run faster and more efficiently, allowing you to focus on other business needs.

Simplicity Plus Power.

You can automate your most time-consuming tasks, eliminating the need for manual intervention. Automatically collect, process, and distribute files. Annotate, rename, split, merge files, and more – all with the touch of a button. And the graphically-based Workflow Builder Tool, which features drag-and-drop functionality, customizable icons, drawing tools, and easy-to-follow validation messages, makes creating your workflows easier than ever.

Flexible Scheduling.

Schedule network-intensive processes after hours to maximize network performance and free up bandwidth during the work day. The Workflow Scheduler has both standard and advanced options, allowing you to choose the specific days and/or times that your workflow should run. You can also choose to run the workflow continually while the PC is on, even when the Dispatcher Phoenix application is not open.

Full Integration with MFP.

The application integrates with bEST (bizhub Extended Solution Technology), a suite of cutting-edge technologies that bring the power of the PC to Konica Minolta devices. You can scan documents into your workflow directly from the MFP control panel, index your documents, browse through your PC's folder structure to choose a folder to store your documents in, use a Search field with type ahead functionality to quickly filter the list of folders displayed, and even create a new folder – all using a visually enhanced display at the MFP.

Powerful. Easy to use and powerful, advanced process automation. Konica Minolta's Dispatcher Phoenix Foundations is a powerful application that can help any business save time by automating document image processing, printing, and routing tasks via customizable workflows. With a large variety of processing features, you can do everything from clean up images, apply watermarks and annotations, and rename files to route documents to folders, FTP servers, MFPs, or email recipients – all automatically. And unique LiveFlo technology provides a real-time view of documents as they are being processed – a great way to identify bottlenecks and make sure your files are reaching their correct destinations. Dispatcher Phoenix Foundations provides you with the convenience and flexibility that you need.

Expand.

Expand the Application as your needs change... you can enhance the functionality of your workflow with optional add-in modules, such as:

File Conversion:

Convert files to PDF file formats, such as PDF Searchable and PDF/A for archiving, or popular Microsoft Office formats, such as Word and Excel.

Bates Stamp:

Apply an unlimited number of Bates stamps (counters, page numbers, dates, etc.) in any position on the page.

OCR:

Use OCR zones to extract data from scanned documents. Rename, route and identify files based on OCR results, or import extracted data into a back-end application.

Barcode Processing:

Barcode recognition allows you to route, split, name, and annotate files based on barcode value. Support for standard as well as 2D barcodes is provided. And, with Dispatcher Phoenix, barcodes can be automatically inserted – anywhere on the page.

Redaction:

Permanently remove sensitive or confidential information from documents with intelligent Redaction technology.

Connectors:

Scan, index, and upload documents to leading content management systems, such

as OnBase® by Hyland, Microsoft SharePoint, OneDrive, and OneDrive for Business, Worldox® by World Software, Workshare, Box, Dropbox, WebDAV, FilesAnywhere, Google Drive and FileAssist, Konica Minolta's cloud-based document management solution.

Forms Processing:

Use advanced pattern matching to search for and process important information, such as Social Security Numbers, Telephone Numbers, and Credit Card Numbers.

Print Release Solution:

Hold print jobs in a queue until release at the MFP by an authenticated user with Release2Me, a convenient print release solution that helps our customers secure their confidential information and eliminate unwanted or duplicate copies. With this easy-to-use feature, our customers can also specify print settings, such as number of copies, at the control panel before their jobs are released. Since users only print out the documents they need, Release2Me helps companies secure their print outs and reduce their overall printing costs.
