

MOBOTIX CLOUD BUNDLE

READY TO INSTALL NOW

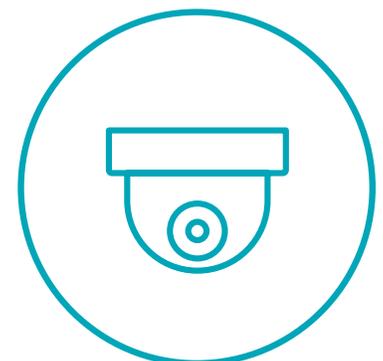

Secure your facility and gain operational oversight with reliable, German-built, indoor video surveillance cameras and a cloud-based video management system (VMS). Monitor who comes and goes – and keep all the data stored safely in the cloud. At Konica Minolta, we understand your security concerns, so we want to make acquiring and self-installing pre-programmed, intelligent, MOBOTIX cameras easy and affordable.

You may already know of the unparalleled images our cameras provide and the intelligent security features you gain when you have a MOBOTIX camera security network. This bundle, however, gives you even more flexibility to review your video and manage your system with your mobile device and computer. And with a cloud-based VMS and cloud storage, there is no server or network storage on site, just the cameras.

WHAT YOU NEED TO KNOW

We have created a cloud bundle with our P26 MOBOTIX indoor cameras, cloud services via MxLINQ™ VMS and optional KMPF Three-Year Financing. These cameras are easily installed in a drop-ceiling or in drywall and connected to the network via a shared Power over Ethernet (PoE) switch.

You can use MxLINQ on a smartphone, tablet or computer, and remotely access all of your MOBOTIX video surveillance cameras. It can even show the high-level Health Status of a system. While you will have cloud storage, you will also have an on-board SD card on every camera - so that you can keep recording activity, even when your network goes down.

WHY IS THIS EASY?

Since we have taken the time to get your cameras already set up for installation, your cameras will arrive ready to install. By following a simple set of instructions, you will be able to activate the system and access your cameras with a feature-rich interface. And, in case you need it, we are also including 30 days of remote support to help you through any challenges.

YOUR RESPONSIBILITY

- Camera Installation
- Power over Ethernet (PoE) switch
- Network Installation
- DHCP-Enabled Network
- Outbound (WAN) Access
